

Practice Exam #1: Chapters 1-4

Section 1: Multiple Choice (1-40)

1. Which philosopher argued that the human mind is a **Tabula Rasa** at birth 6?
 - a) Plato
 - b) Aristotle
 - c) John Locke
 - d) René Descartes
2. **Structuralism** utilized which method to identify the basic elements of the mind 7?
 - a) Introspection
 - b) Natural Selection
 - c) Functionalism
 - d) Methodological Behaviorism
3. Who is the father of **Methodological Behaviorism** 8?
 - a) B.F. Skinner
 - b) Clark Hull
 - c) James Watson
 - d) Edward Tolman
4. The **Law of Parsimony** suggests that:
 - a) Complex explanations are always better.
 - b) Simpler explanations are generally preferable.
 - c) Behavior is caused by internal thoughts.
 - d) Human behavior is fundamentally different from animal behavior.
5. Which school of **Behaviorism** emphasizes **Social Learning Theory** and **Observational Learning**?
 - a) Bandura's Social Learning Theory
 - b) Hull's Neobehaviorism
 - c) Tolman's Cognitive Behaviorism
 - d) Skinner's Radical Behaviorism
6. In an experiment, the variable that is manipulated by the experimenter is the:
 - a) Dependent Variable
 - b) Intervening Variable
 - c) Independent Variable
 - d) Functional Relationship

7. A procedure that increases the **appetitiveness** of a **stimulus** is known as a(n):
- a) Abolishing Operation
 - b) Establishing Operation
 - c) Covert Behavior
 - d) Contingency
8. **Spatial Contiguity** refers to events that occur:
- a) Close together in time.
 - b) Close together in space.
 - c) In a specific sequence.
 - d) Repeatedly over a week.
9. Which research design involves repeated alternations between **baseline** and treatment 13?
- a) Simple-Comparison (AB)
 - b) Reversal (ABAB)
 - c) Multiple-Baseline-Across-Persons
 - d) Criterion-Changing
10. A **reflex arc** is the neural structure underlying:
- a) Fixed Action Patterns
 - b) Operant Conditioning
 - c) Simple reflexes
 - d) Dishabituation
11. **Habituation** is characterized by a(n):
- a) Increase in response to a repeated stimulus.
 - b) Decrease in response to a repeated stimulus.
 - c) Sudden recovery of a response.
 - d) Generalization of a response.
12. In **Classical Conditioning**, the stimulus that naturally elicits a response without prior learning is the:
- a) Neutral Stimulus (NS)
 - b) Conditioned Stimulus (CS)
 - c) Unconditioned Stimulus (US)
 - d) Conditioned Response (CR)
13. The **Opponent-Process Theory** explains that the **b-process**:
- a) Is directly elicited by the event.
 - b) Decreases in strength with repeated exposure.
 - c) Is elicited by the a-process to maintain homeostasis.
 - d) Occurs only during Aversive Conditioning.

14. What is the formula for the **Suppression Ratio**?
a) $\frac{\text{CS responses}}{\text{Pre-CS responses} + \text{CS responses}}$ b) $\frac{\text{CS responses}}{\text{CS responses} + \text{Pre-CS responses}}$ c) $\frac{\text{US intensity}}{\text{CS duration}}$ d) $\frac{\text{Baseline responses}}{\text{Treatment responses}}$
15. A **Suppression Ratio** of 0.5 indicates:
a) Total suppression of behavior.
b) Partial suppression of behavior.
c) No suppression of behavior.
d) An increase in behavior.
16. Which temporal arrangement is generally the most effective for **conditioning**?
a) Trace Conditioning
b) Simultaneous Conditioning
c) Delayed Conditioning
d) Backward Conditioning
17. **Extinction** occurs when:
a) The US is presented without the CS.
b) The CS is repeatedly presented without the US.
c) A novel stimulus is introduced.
d) The organism forgets the association.
18. **Spontaneous Recovery** is the:
a) Permanent return of a CR.
b) Reappearance of a CR following a rest period after extinction.
c) Increase in CR strength during acquisition.
d) Recovery of a response through disinhibition.
19. **Stimulus Generalization** is the tendency for a **CR** to occur in the presence of a stimulus that is:
a) Identical to the CS.
b) Similar to the CS.
c) Opposite to the CS.
d) Unrelated to the CS.
20. **Overshadowing** occurs when:
a) A faint stimulus is paired with a strong US.
b) The more salient of two concurrent stimuli captures the conditioning.
c) An established CS prevents learning of a new NS.
d) The US is revalued after conditioning.

21. **Blocking** differs from **overshadowing** because it involves:
- a) Two neutral stimuli.
 - b) An established CS and a new NS.
 - c) Changes in US intensity.
 - d) A Fixed Action Pattern.
22. **Experimental Neurosis** was first observed by Pavlov during:
- a) Extinction trials.
 - b) Discrimination Training with increasingly similar stimuli.
 - c) Higher-Order Conditioning.
 - d) Appetitive Conditioning with food.
23. **Higher-Order Conditioning** involves:
- a) Pairing a new NS with an established CS.
 - b) Pairing a new NS with a US.
 - c) Sensory Preconditioning.
 - d) US Revaluation.
24. **Disinhibition** is the sudden recovery of a response during **extinction** when:
- a) The US is presented.
 - b) A novel stimulus is introduced.
 - c) The CS is changed.
 - d) The animal is rested.
25. **John Watson's** claim that he could train any infant regardless of ancestry was a rejection of:
- a) Behaviorism
 - b) Biological Determinism
 - c) Empiricism
 - d) Functionalism
26. **Thorndike** and **Darwin** influenced which school of psychology that studied the adaptive mind?
- a) Structuralism
 - b) Functionalism
 - c) Methodological Behaviorism
 - d) Cognitive Behaviorism
27. **Covert Behavior** is defined as:
- a) Behavior that is publicly observable.
 - b) Behavior that can only be subjectively perceived.
 - c) Behavior elicited by a sign stimulus.
 - d) Behavior that has been extinguished.

28. **Satiation** is a type of **Abolishing Operation** that:
- a) Increases the value of a stimulus.
 - b) Decreases the value of a stimulus due to prolonged exposure.
 - c) Occurs only with Aversive Stimuli.
 - d) Speeds up the Acquisition Curve.
29. **Temporal Contiguity** is the extent to which events occur:
- a) In the same location.
 - b) Close together in time.
 - c) At the same intensity.
 - d) During Baseline (Phase A).
30. Which design is best for demonstrating a **functional relationship** while minimizing ethical concerns of withdrawing treatment?
- a) Reversal Design
 - b) Simple-Comparison Design
 - c) Multiple-Baseline Design
 - d) Factorial Design
31. **Dishabituation** is the reappearance of a:
- a) Conditioned Response.
 - b) Habituated response after a novel stimulus.
 - c) Sensitized response.
 - d) Reflex Arc.
32. **Appetitive Conditioning** involves a **US** that is:
- a) Unpleasant.
 - b) Pleasant or sought out.
 - c) Neutral.
 - d) Painful.
33. In the **Conditioned Suppression** paradigm, the **CR** is:
- a) Salivation.
 - b) Pressing a lever.
 - c) The reduction of a behavior (e.g., fear).
 - d) A Fixed Action Pattern.
34. The **Asymptote of conditioning** is the:
- a) Start of the Acquisition Curve.
 - b) Maximum level of conditioning possible.
 - c) Period of Extinction.
 - d) Point of Spontaneous Recovery.

35. **Sensory Preconditioning** involves pairing:
- a) An NS with a US.
 - b) Two NS stimuli together before one is conditioned.
 - c) A CS with a new NS.
 - d) A US with a UR.
36. **Occasion Setting** is a procedure where a stimulus signals:
- a) That a CS will be followed by a US.
 - b) That Extinction is beginning.
 - c) That the NS is now a CS.
 - d) The start of the b-process.
37. **US Revaluation** occurs when:
- a) The NS is changed.
 - b) The intensity of the US is altered after conditioning.
 - c) The CS is extinguished.
 - d) Disinhibition occurs.
38. **Pseudoconditioning** is when an elicited response looks like a **CR** but is actually the result of:
- a) Sensitization.
 - b) Habituation.
 - c) Higher-Order Conditioning.
 - d) Blocking.
39. **Semantic Generalization** is the generalization of a **CR** to stimuli that are:
- a) Physically similar.
 - b) Similar in meaning.
 - c) Opposite in meaning.
 - d) Auditorily similar.
40. **Latent Inhibition** suggests that a(n):
- a) An unfamiliar stimulus is easier to condition than a familiar one.
 - b) Familiar stimulus is easier to condition.
 - c) US intensity does not matter.
 - d) Extinction is permanent.

Section 2: True or False (41-55)

1. **Descartes** believed that animal behavior is entirely **reflexive** (T/F)
2. **Watson's Methodological Behaviorism** included the study of thoughts and feelings (T/F)
3. **Hull's Neobehaviorism** utilized **intervening variables** that were physiological in nature (T/F)

4. **Skinner** viewed internal events as behaviors that themselves need explaining (T/F)
5. A **functional relationship** is a synonym for a cause-and-effect relationship (T/F)
6. **Overt behavior** is behavior that can only be subjectively perceived (T/F)
7. **Deprivation** usually functions as an **Establishing Operation** (T/F)
8. In an **ABAB design**, the "A" phase represents the treatment (T/F)
9. **Habituation** is more likely to occur with high-intensity stimuli (T/F)
10. **Dishabituation** involves the recovery of a **habituated** response after a novel stimulus (T/F)
11. **Classical Conditioning** is also known as **Pavlovian Conditioning** (T/F)
12. The **Suppression Ratio** can never be higher than 0.5 (T/F)
13. **Simultaneous Conditioning** is the most effective temporal arrangement (T/F)
14. **Stimulus Discrimination** can be trained using a **CS+** and a **CS-** (T/F)
15. **Extinction** is essentially the same as "unlearning" or forgetting (T/F)

Section 3: Matching and Short Answer (56-75)

Match the School of Behaviorism to its core tenet (56-60):

56. Methodological Behaviorism 57. Neobehaviorism 58. Cognitive Behaviorism
59. Social Learning Theory 60. Radical Behaviorism

- A. Internal events are behaviors, not causes.
- B. Uses **cognitive maps** and hypothesized processes.
- C. Only study publicly observable behavior.
- D. Emphasizes **Observational Learning**.
- E. Uses physiological-type **intervening variables** (e.g., hunger drive).

Fill in the Blank (61-70):

61. The time between the onset of the **NS** and the **US** is called the **Interstimulus Interval (ISI)**.
62. In the **Opponent-Process Theory**, the **a-process** correlates closely with the presence of the event.
63. A **Fixed Action Pattern** is elicited by a specific stimulus known as a **sign stimulus**.
64. **Disinhibition** occurs during the process of **extinction**.
65. The maximum level of conditioning in an acquisition curve is the **asymptote**.
66. **Overshadowing** involves the more **salient** stimulus.
67. **Trace Conditioning** is defined by a(n) **trace interval** where no stimuli are present.
68. **Suppression Ratio** measures the level of **fear** or suppression.
69. **Biological Determinism** is the belief that abilities are **inborn**.
70. **Aristotle's** view that knowledge is acquired through experience is called **Empiricism**.

Short Explanation (71-75):

71. Explain the difference between an **Establishing Operation** and an **Abolishing Operation**.

72. Describe how a **Multiple-Baseline-Across-Settings** design works.

73. Why is **Delayed Conditioning** generally more effective than **Trace Conditioning**?

74. How does **Blocking** demonstrate that "contiguity is not enough" for conditioning?

75. Define **Experimental Neurosis** and the procedure used to induce it.
